## **1. OVERVIEW OF THE DOCUMENT VERSION**

<b>Version</b>	<b>Status / Change</b>	<b>Date</b>
1.0	Publication of the Guidelines	18.05.2015.
1.1	Guidelines new version – new date of use, new way of handling information of the debtor and the creditor; rename of fields 2.1, a change in the procedure of the order for payment of salaries (introduction of the HR69 and update Description of payment ), rules for populating Charge Bearer for SEPA credit transfers and Credit transfers in HRK under SEPA rules	01.03.2016.

## **2. INTRODUCTION**

The Guidelines describe the manner of creating and the scope of application of XML message pain.001.001.03 for initiation of national, cross-border and international credit transfers in accordance with the ISO 20022 standard (XML Customer Credit Transfer Initiation message), which is sent to the execution of the payment service provider (PSP) in the territory of the Republic of Croatia.

The Guidelines are primarily intended for payment services users (PSUs) non-consumers, who submit/send their payment orders to the PSP in electronic form.

The Guidelines are applicable from 6th June, 2016.

The Guidelines have been prepared through mutual cooperation between the banking community and the Financial Agency (FINA).

The Guidelines are publicly available at: [www.sepa.hr](http://www.sepa.hr) and on the websites of the Croatian Banking Association, commercial banks registered in the Republic of Croatia, the Croatian Chamber of Economy and the Financial Agency.

The Guidelines have been compiled with special attention to ensure accuracy of information. However, the Croatian banking community and the Financial Agency are not responsible for any possible damage or errors that could occur as a consequence of misinterpretation of the information contained in the Guidelines.

For further information, PSUs may contact the PSP in which they maintain a transaction account.

## **3. SCOPE OF IMPLEMENTATION**

The Guidelines apply to:

- 3.1. SEPA credit transfers
- 3.2. Credit transfers in HRK under SEPA rules
- 3.3. Other (non-SEPA) credit transfers

### **3.1 SEPA credit transfers**

A SEPA credit transfer is a national or cross-border payment transaction with the following characteristics:

- payment currency is the euro ('EUR')
- availability of creditor's PSP in the SEPA payment systems
- identification of creditor's PSP by the BIC code
- transaction accounts of the debtor and the creditor are in the IBAN format
- the debtor and the creditor pay fees only to their PSPs - shared charges (SLEV)
- the transaction execution priority code is NORM
- the amount of the payment transaction is not limited, but there is a technical limit of EUR 999,999,999.99.

If a credit transfer does not meet the characteristics of SEPA credit transfers, the debtor's PSP will execute the credit transfer as a non-SEPA credit transfer and, thereby, ignore the specific SEPA fields, such as the ultimate creditor or the ultimate debtor.

### **3.2 Credit transfers in HRK according to SEPA rules**

A credit transfer under the SEPA rules is a national payment transaction in HRK adjusted to the requirements of SEPA credit transfers and national specificities.

### **3.3 Other (non SEPA) credit transfers**

Other credit transfers are the following payment transactions:

- national transactions in all other currencies except HRK and EUR
- national transactions in EUR if they do not meet the SEPA criteria
- cross-border transactions in EUR if they do not meet the SEPA criteria
- cross-border transactions in currencies other than EUR
- international transactions in all currencies (including HRK)
- transactions containing special instructions (i.e., urgent execution)
- transactions executed by cheque issuance.

## DEFINITIONS

Term		Explanation of the term – Croatian term
English term	Croatian term	
Additional Remittance Information	Dodatni detalji plaćanja	Additional information, in free text form, to complement the structured remittance information
Batch Booking	Način terećenja računa platitelja	Identifies whether the account is debited per individual transaction or for the sum of the amounts of all transactions within the group
Category Purpose	Kategorija namjene	Specifies the purpose of the instruction based on a set of pre-defined categories.
Charge Bearer	Troškovna opcija	Specifies which party will bear the charges associated with the processing of the payment transaction (in SEPA only SLEV, meaning SHA)
Credit Transfer	Kreditni transfer	National or cross-border payment service for crediting a creditor's payment account with a payment transaction or a series of payment transactions from a debtor's payment account by the PSP which holds the debtor's payment account, based on an instruction given by the debtor.
Credit Transfer Transaction Information	Informacija o pojedinačnoj transakciji kreditnog transfera	Set of elements used to provide information on the individual transaction included in the message.
Creditor/ Beneficiary	Primatelj plaćanja	a natural or legal person who holds a payment account and who is the intended recipient of funds which have been the subject of a payment transaction
Creditor /Beneficiary Account	Račun primatelja plaćanja	For national and cross-border credit transfer it must be in IBAN form.
Creditor Agent/Beneficiary's Bank	PPU primatelja plaćanja	PSP servicing an account for the creditor.
Creditor Reference Information	Referenca koju određuje primatelj	Set of elements of structured reference information
Debtor *=Originator**	Platitelj	A natural or legal person who holds a payment account and allows the execution of a payment instruction.
Debtor/Originator Account	Račun platitelja	It must be in IBAN form.
Debtor Agent /Originator Bank	PPU platitelja	PSP of the debtor servicing an account for the debtor
End to End Identification	Jedinstveni identifikator	Unique identification assigned by the debtor to unambiguously identify the transaction. This identification is passed on, unchanged, throughout the entire end-to-end chain.
Initiating Party	Inicijator plaćanja	It may be the debtor or other person initiating payment
Instructed Amount	Iznos	Amount of individual transaction
Instruction Identification	Identifikacijska oznaka naloga-referencija	Unique identification (reference), as assigned by the debtor for the PSP of the debtor, or PSP debtor for the PSP status receiver, to unambiguously identify the instruction. Can be included in more messages related to the same instruction.
Originator *	Inicijator poruke	Party that issues the status
Payment Identification	Identifikacijska oznaka plaćanja	Set of elements used to reference a payment instruction.
Payment Type Information	Informacije o vrsti plaćanja	Set of elements used to specify the type of transaction.
Purpose	Šifra namjene	
Reference	Referentna oznaka	Unique identification, as assigned by the creditor, according to the Unique Overview of Basic "Reference Number" Models with Model Descriptions, Contents and Application Explanations as well as Applicable Control Number Calculation Modules or according to ISO 11649 (RF...)
Reference Party**	Stvarni dužnik i/ili krajnji primatelj	A natural or legal person on behalf of whom a debtor makes a payment or a creditor receives a payment (Ultimate Debtor or Ultimate Creditor)
Remittance Information	Detalji plaćanja	Structured or unstructured payment details specified by the creditor
Requested Execution Date	Traženi datum izvršenja	Date at which the initiating party requests the PSP to process the payment.
Service Level	Razina usluge	Rules under which the transaction should be processed.
Transaction Identification	Referenca banke	Unique identifier, as assigned by the bank, to unambiguously identify a transaction which is passed on, unchanged, throughout the entire end-to-end payment chain.
Ultimate Creditor	Krajnji primatelj	Ultimate recipient of funds
Ultimate Debtor	Stvarni dužnik	Ultimate party that owes an amount of money to the creditor/ultimate creditor.

## **6. USE OF ISO 20022 in RH XSD HR (XSD HR)**

The standard for creation of a pain.001.001.03 XML message is based on the ISO 20022 standard, and the technical validation of XML messages is carried out by using the XSD scheme. The XSD scheme defines the elements that can be used, whether the use of elements is mandatory or optional, the content of elements, and in certain cases, the content itself (in certain cases the content of an element can only be the code specified in the list of codes of ISO).

In those elements, where the content is the code listed in the corresponding list of codes, the code must be populated correctly, otherwise the message or the order is not executed but it is rejected.

The lists of codes that are not embedded in the XSD scheme (i.e., country code lists, currency code lists, purpose code lists, etc.) are available at: [www.iso20022.org/](http://www.iso20022.org/) **external\_code\_list**.

The user of these Implementation Guidelines undertakes to track the changes of the published lists of codes in order to use the correct codes.

The Croatian banking community and the Financial Agency have developed the HR XSD scheme based on the ISO 20022 XSD scheme, in which certain elements for initiating an SCT have been omitted, mandatory individual elements have been changed, and certain specifics have been incorporated in order to meet the needs of the PSUs.

The HR XSD scheme defines the elements that are valid for use only in Croatia. The name of the HR XSD scheme is:

- pain.001.001.03.hr.xsd

The ISO 20022 XSD scheme is available at: [www.iso20022.org](http://www.iso20022.org)

The HR XSD scheme is published on the website of the banks, the Croatian Banking Association, the Croatian Chamber of Economy and the Financial Agency.

## **7. SPECIFICATION OF THE pain.001.001.03 MESSAGE FORMAT**

The names of XML message elements that are originally in the English language have also been specified in these Guidelines in the Croatian language and supplemented with a description in the Croatian language.

Only the use of elements which are described in the Guidelines is permitted in a message.

If the elements of a message are populated in a different manner than described in the Guidelines, the message or the order is rejected and it is not executed.

### **a. The meaning of the data in a message:**

Index	Multi	Mandatory /Optional (M/O)	ISO element name	ISO XML tag ( <XML Tag> )	Format
-------	-------	---------------------------	------------------	---------------------------	--------

**Index** - the element code in the message.

**Multi rule** - the first data indicates the mandatoriness of occurrence of message elements, and the second data indicates the number of allowed repetitions

Example of the rule:

- [0..1] - indicates that the element is optional and may be specified one time only
- [0..n] - indicates that the element is optional and may be specified from one to *n* number of times

- [1..1] - indicates that the element is mandatory and may be specified one time only
- [1..n] - indicates that the element is mandatory and may be specified from one time to *n* number of times

The elements of a message are defined by their hierarchical structure. If data in a sub-element is entered, it is mandatory to specify the elements of a higher hierarchical level. If sub-elements are marked with {Or ... Or}, it is possible to use only one of them.

When an optional element is used, and it contains sub-elements (of a lower hierarchical level), the rule of populating that element (M/O) is mandatory and must be respected.

**Mandatory/Optional (M/O)** - the rule of using a message element, mandatory or optional use

**ISO element name** - the name of the message element is given in English as defined in ISO 20022 XML standard, with a translation into Croatian. The element can contain sub-elements, which are shifted to the right and marked with the addition sign »+«.

I.E.: ++ Debtor  
      +++ Name

**ISO XML tag (<XML Tag>)** - XML element tag, e.g.: <Dbtr> Debtor/Payer.

Note: if using the XML tag, the corresponding element data may not be empty and at least one character must be entered.

**Format** - the element format is described, i.e.: Text, Code

### b. Description of data formats

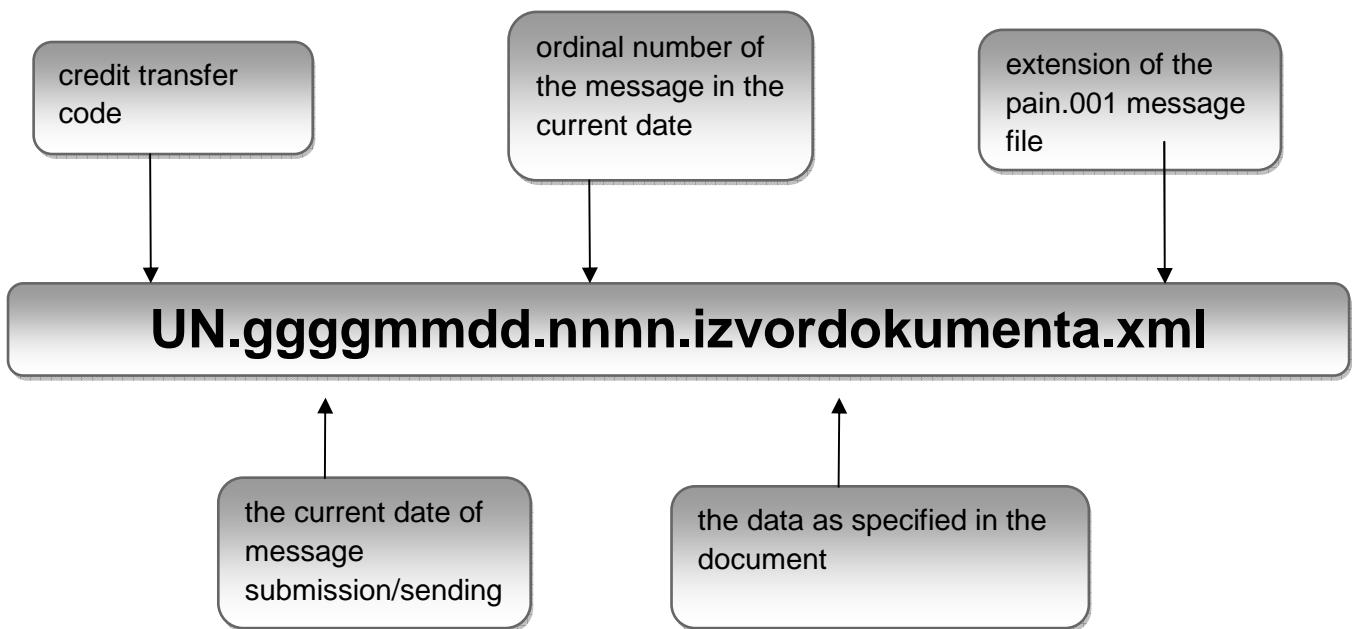

Examples of data format descriptions:

Format	Format description	Description
<b>Dates</b>		
ISODate		ISO date in the form of »YYYY-MM-DD«, where »YYYY« is the year, »MM« the month, »DD« the day. Example: 2010-10-04
ISODateTime		ISO date and time »YYYY-MM-DDThh:mm:ss.sss«, where »YYYY« is the year, »MM« the month, »DD« the day, »hh« the hour, »mm« the minute, »ss« the second, »sss« the hundredth of a second. Example: 2010-10-04T08:35:40.125
<b>The amount and number</b>		
CurrencyAndAmount	number: max 18 decimals: max 5 Currency code. [A-Z]{3,3}	Currency code is stated in the ISO three-letter format next to the »Ccy« attribute.  The amount consists of 18 characters (numbers). An integer has a maximum of 13 characters, and a decimal number a max of 5. The decimal separator is the point. It is not allowed to enter a negative amount.  Note: the rule for populating the Amount field is described by element 2.77  Example: <Ccy="EUR">1000.00
Numeric	[0-9]{1,15}	A number can have a maximum of 15 places Example: 123456789012345

<b>Format</b>	<b>Format description</b>	<b>Description</b>
DecimalNumber	number: max 18 decimal places: max 17	Maximum 18 places, of which a maximum of 17 numbers for decimal places. The decimal separator is the point.  Example: 123456789.987654321  Note: for a credit transfer, a maximum of 2 numbers for decimal places may be used.
Number	No.: max 18 decimal places: 0	Maximum 18 places, no decimal places,  Example: 123456789987654321
<b>Text</b>		
Text		The text can use characters of the Latin alphabet  (a b c d e f g h i j k l m n o p q r s t u v w x y z A B C D E F G H I J K L M N O P Q R S T U V W X Y Z  For national transactions the Č,Ć,Š,Ž,Đ, č,ć,ž,š,đ symbols can be used 0 1 2 3 4 5 6 7 8 9 / - ? : ( ) . , ' + space  Rule: Word-spacing and »-» must not be used in the first place of the record in the XML element/field. A slash (/) must not be used at the beginning or end of the data, nor twice in a row. Note: if it departs from the rule, the message, the group of orders or the transaction will be rejected.  The reference "Message identification code (msgId)", "Payment identification code (PmtInfId)" and "Order-reference identification code (InstrId)" must comply with the following: - the content is restricted to the Latin character set, as defined above - the content may not start or end with '/' the content may not contain '//'.  
Text	Max3	Maximum length 3 places.  Example: 112
Text	Max35	Maximum length 35 places.  Example: Payment operations street
<b>Identifier</b>		
BICIdentifier	[A-Z]{6,6}[A-Z2-9][A-NP-Z0-9]([A-Z0-9]{3,3}){0,1}	BIC-type identifier (Bank Identifier Code), which must consist of 8 or 11 characters  Example: AAAAHR2X ili AAAAHR2XXXX
BEIIdentifier	[A-Z]{6,6}[A-Z2-9][A-NP-Z0-9]([A-Z0-9]{3,3}){0,1}	BEI-type identifier (Business Entity Identifier).
IBANIdentifier	[A-Z]{2,2}[0-9]{2,2}[a-zA-Z0-9]{1,30}	IBAN account in electronic form  Example: HRXX7777779999999999
<b>Code</b>		
CountryCode	[A-Z]{2,2}	ISO two-letter country code.  Example: HR
CurrencyCode	[A-Z]{3,3}	ISO three-letter currency code.  Example: EUR

For national payments in HRK and EUR, diacritic characters (č,ć,š,...) can be used, while in cross-border and other (non-SEPA) payments, they are not used.

c. Recommended name of the pain.001.001.03 message file

d. Structure of the pain.001.001.03 message

A message/file containing XML - pain.001.001.03 message has the following structure:

```
<?xml version="1.0" encoding="UTF-8"?>
<Document xmlns="urn:iso:std:iso:20022:tech:xsd:sctrh:pain.001.001.03">
    <CstmrCdtTrfInitn>
        message content...
    </CstmrCdtTrfInitn>
</Document>
```

The message consists of three sets of data:

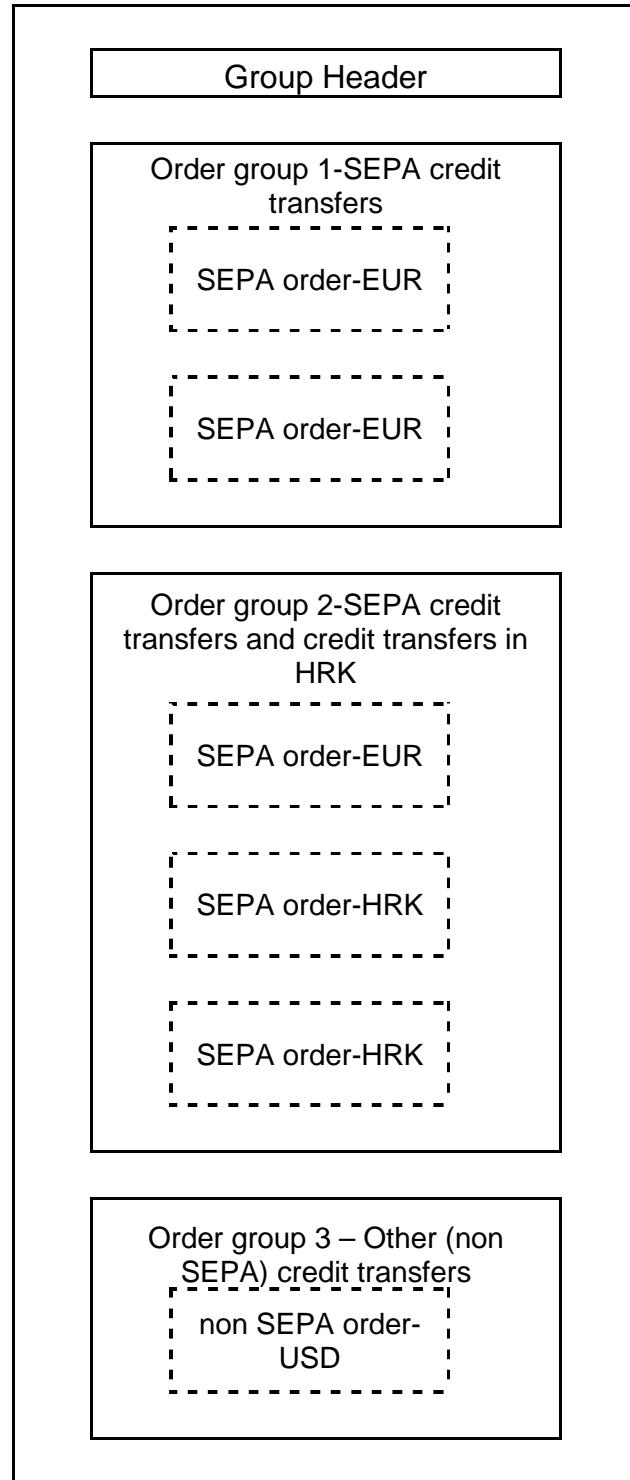

- Root XML element - **<CstmrCdtTrfInitn>**
- **GroupHeader** (**<GrpHdr>**) - **The header or the leading record** - a set of data which is mandatory and appears once in the message - the message level.
- **Payment Information** (**<PmtInf>**) - **Payment Information** - a set of data which is mandatory and repeated in the message. Among other information, it contains data on the debtor - the level of a group of orders.
- **Transaction Information** **<CdtTrfTxInf>** - **Information about a credit transfer transaction** - a set of data which is mandatory and repeated. Among other, it contains data on the creditor - the order level

**Note:**

Payment Information - a group of orders specifically created for SEPA orders and/or credit transfers in HRK under SEPA rules, and separately for other (non-SEPA) credit transfers

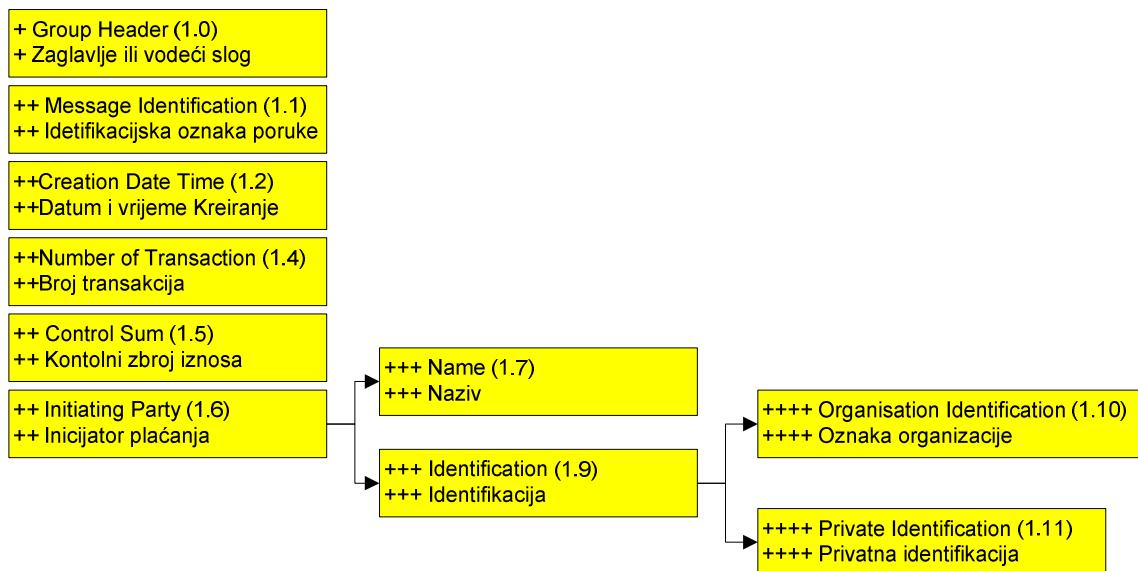

Example:

- Order group 1 - SEPA credit transfers
- Order group 2 - SEPA credit transfers and credit transfers in HRK
- Order group 3 - Other (non-SEPA) credit transfers

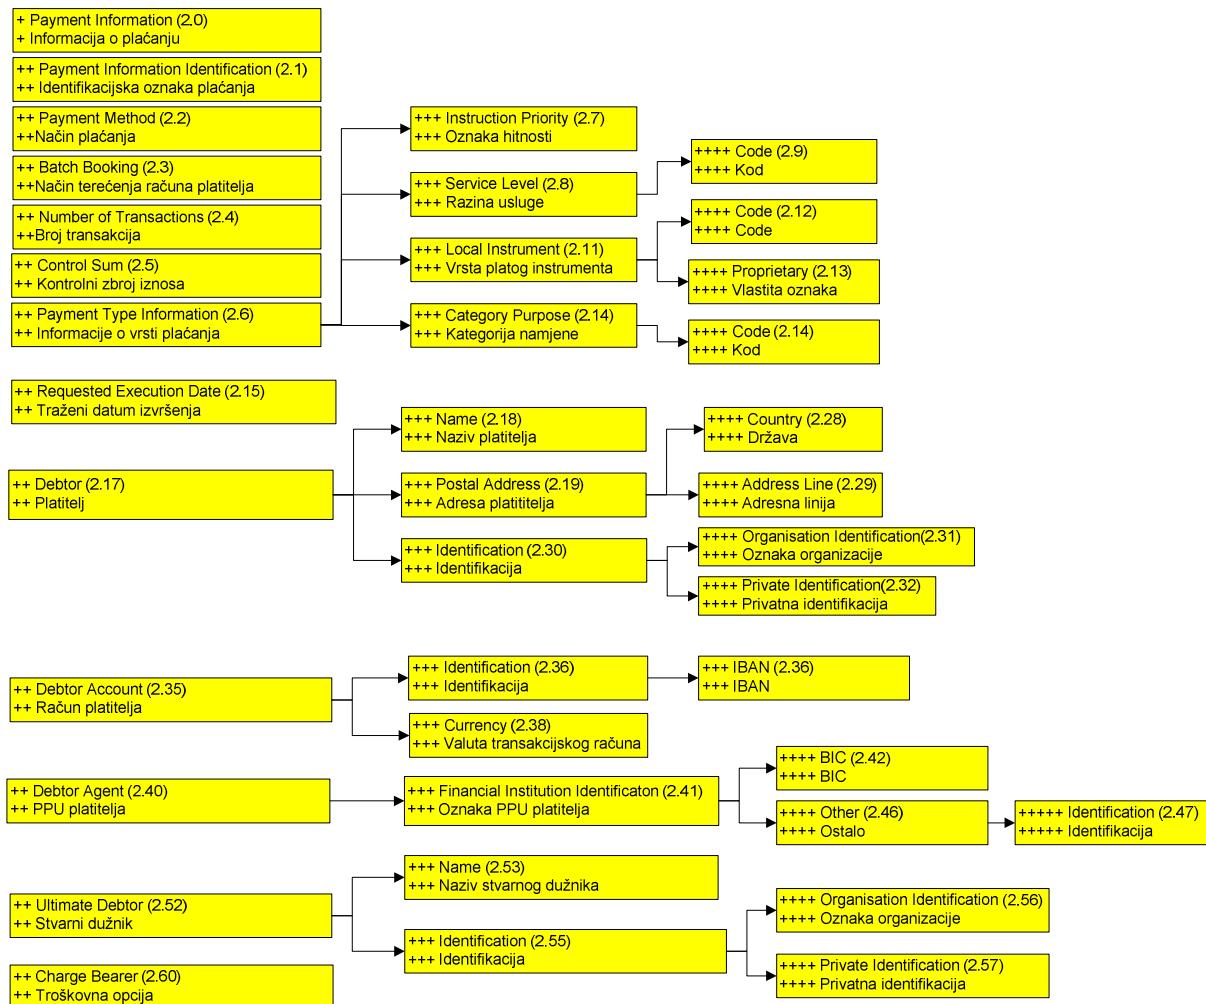

A detailed overview of the structure of XML messages for SEPA credit transfers, credit transfers in HRK under SEPA rules and other (non SEPA) credit transfers:

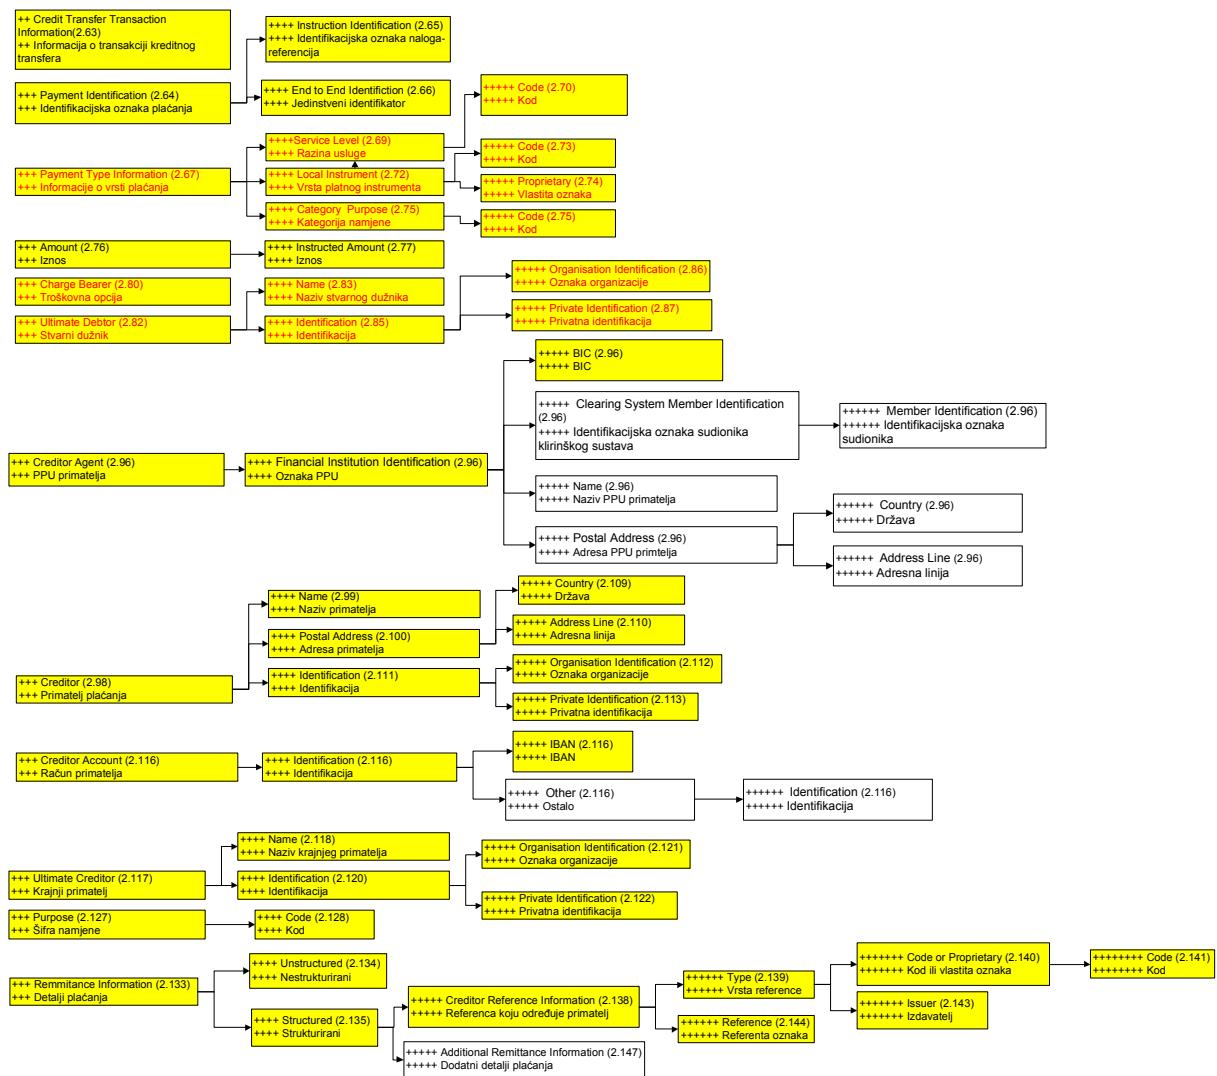

- **GroupHeader (<GrpHdr>) (Zaglavlje ili vodeći slog) – message level**

- **Payment Information (<PmtInf>) (Informacija o plaćanju) – group of orders level**

- Transaction Information <CdtTrfTxInfo> (Informacija o transakciji kreditnog transfera) - order level**

Note: the red text means that the element can be used either at the group of orders level or at the individual order level.

## 7.1 Message elements for SEPA credit transfers and credit transfers in HRK under SEPA rules

The table below shows message elements for SEPA credit transfers and credit transfers in HRK under SEPA rules. A detailed description and examples of mandatory and recommended elements are provided in Section 8.

### 1.1 Message Identification (Identifikacijska oznaka poruke)

**Description:** Mandatory

Unique message identifier within the same date of occurrence and the same sender.

The recommendation is to enter the data in the following manner:

**UNyyymmdnnndocument source**; where UN is the code for a credit transfer, yyymdd the current date of submission / sending the messages, nnnn the ordinal number of the messages in the current date and the source of the document described as follows.

If multiple messages are submitted/sent on the current date, the identification code of the messages must be unique.

A message with the repeated Identification code of the same initiator/sender on the current date is rejected.

PSP will accept messages with a different *Identification code (MsgId)* than recommended if it fits the required format (35 characters).

**Document source** is populated in the case of national payment transactions in HRK when the payment is submitted to a FINA office or it is initiated by FINA e-payment service. The allowed values are:

- 300 - orders of banks for their payments and payments charged to their clients
- 701 - clients' orders initiated through FINA e-payment service or FINA offices
- 803 - electronic orders initiated by the bank to charge the transaction accounts of their clients in order to execute the basis for payment
- 652 - electronic medium submitted by the Croatian National Bank and the Ministry of Finance for payments through CLVPS
- 530 - orders related to the collection of the state
- 502 - orders related to public revenues with special controls
- 520 - special treatment of the payment order
- 550 - refunds and repostings public revenue provided by the Tax Administration and APIS IT

## 2.1 Payment Information Identification (Identifikacijska oznaka grupe plaćanja)

**Description:** Mandatory

Unique identifier defined by the debtor/initiator in order to enable unique identification of a group of orders within a message.

Each successive group of orders within the message must have a unique payment information identification.

A group of orders with a repeated payment information identification within the message is rejected.

**XML tag:** < PmtInflId >

**Occurrences:** [1..1]

**Data type:** Text/Tekst

**Data format:** maxLength: 35

**Example:** <PmtInflId>201326113</PmtInflId>

## 2.2 Payment Method (Način plaćanja)

**Description:** Mandatory

Indicates the type of payment.

➤ SEPA credit transfers and Credit transfers in HRK under SEPA rules: enter TRF

➤ Other (non SEPA) credit transfers: enter the code from the list of codes provided below.

**XML tag:** <PmtMtd>

**Occurrences:** [1..1]

**Data type:** Code/Kod

Code	Name	Definition
TRF	CreditTransfer	Transfer of an amount of money in the books of the account servicer.
CHK	Cheque	Written order to a bank to pay a certain amount of money from one person to another person.

**Example:** <PmtMtd>TRF</PmtMtd>

## 2.3 Batch Booking (Način terećenja računa platitelja)

**Description:** Optional

Indicates debiting of the debtor's account in the total amount and crediting "n" accounts in individual amounts, or debiting the debtor's account for each individual amount credited on the creditor's accounts.

Batch booking is a subject to agreement between PSU and PSP.

The following data must be used:

- **True** - indicates debiting of the debtor's account in the total amount
- **False** - indicates debiting of the debtor's account in individual amounts and crediting of the creditor's account.

If the field is not populated (no tag), it implies individual booking, i.e. **False** is used in the field.

If **True** is used in the field:

- the debtor's account should have sufficient funds for the whole group of orders.
- the currency of the payment orders must be the same within the group
- the group of orders and all orders within the group must be correct

otherwise the group of orders is rejected.

**XML tag:** <BtchBookg>

**Occurrences:** [0..1]

**Data type:** True/False

**Example:** <BtchBookg>FALSE</BtchBookg>

## 2.4 Number Of Transactions (Broj transakcija)

**Description:** Optional

Indicates the total number of individual orders in a group of orders.

The total number of orders in a group of orders must correspond with the count of individual orders in the group of orders, i.e. the count of all fields 2.63 - *Credit Transfer Transaction Information (Informacija o transakciji kreditnog transfera)*.

A group of orders with an incorrect count of individual orders within the group of orders is rejected.

**XML tag:** <NbOfTxns>

**Occurrences:** [0..1]

**Data type:** Text/Tekst

**Data format:** Max15NumericText

**Example:** <NbOfTxns>1</NbOfTxns>

## 2.5 Control Sum (Kontrolni zbroj iznosa)

**Description:** Optional

Indicates a control sum of all individual orders in the group of orders in the 2.77 field regardless of the currency.

If the format or the control sum is incorrect, the group of orders is rejected.

**XML tag:** <CtrlSum>

**Occurrences:** [0..1]

**Data type:** DecimalNumber/Decimal number

**Data format:** No.: max 18 decimal places: max 2

**Example:** <CtrlSum>153.34</CtrlSum>

## 2.6 Payment Type Information (Informacije o vrsti plaćanja)

**Description:** Optional

If used, it is recommended to provide information at the group level rather than at an individual order level, i.e. *Credit Transfer Transaction Information - 2.63*.

If both 2.6 and 2.67 fields are used, the order is rejected.

If TRUE is entered into the Btchbookg field, and the <PmtTpInf> is entered both in 2.6 and 2.67 fields, or only in the 2.67 field, the entire group of orders is rejected.

**Usage rule:** If the field *Instruction Priority* is used, *Payment Type Information* must be populated at the group of orders level.

If TRUE is used in the Batch Booking field, then the Payment Type Information may only be populated at the level of a group of orders, otherwise the group of orders is rejected.

#### 2.133 Remittance Information (Detalji plaćanja)

**Description:** Optional

Creditor information (creditor's reference number and payment description).

**Usage rule:** Either unstructured or structured remittance information is used.

- National payment transactions in HRK:

Structured remittance information field (2.135) is mandatory and populated with the model and creditor's reference number according to the Unique Overview of Basic Reference Number Models, with a description of models, content and explanation of their usage and method of calculating the control number, and Instructions on the manner of payment of budget revenues, mandatory contributions and revenues for financing other public needs. Model and Reference Number should be entered in a row, without spaces (eg HR002016-04-04).

If the model and creditor's reference number data is not used, HR99 must be populated. If the reference number is populated without the model, the model HR00 must be used.

The Additional Remittance Information field (2.147) must be populated with a description of payment.

If data on the model and creditor's reference number or HR99 is not populated, and if the Additional Remittance Information field does not contain a description of payment, the order is rejected.

➤ *National payment transactions in EUR:*

It is mandatory to populate the field Structured (2.135) remittance information, i.e. the model and creditor's reference number according to the Unique Overview of Basic Reference Number Models, with a description of models, content and explanation of their usage and method of calculating the control number.

Model and Reference Number should be entered in a row, without spaces (eg HR002016-04-04).

If the model and creditor's reference number data is not populated, HR99 must be used. If the reference number is populated without the model, the model HR00 must be used.

The Additional Remittance Information field (2.147) must be populated with a description of payment.

If data on the model and creditor's reference number or HR99 is not populated, and if the Additional Remittance Information field does not contain a description of payment, the order is rejected.

➤ *Cross-border payment transactions in EUR:* Either unstructured or structured remittance information is used. It is not permitted to use the Additional Remittance Information field (2.147)

➤ *Other (non SEPA) credit transfers:* Either unstructured or structured remittance information is used. The recommendation is to use unstructured remittance information. If structured remittance information is used, PSP transfers a maximum of 140 characters.

SCOR	StructuredCommunicationReference	Document is a structured communication reference provided by the creditor to identify the referred transaction.

**Example:** : <Cd>SCOR</Cd>

## **2.143 Issuer (Izdavatelj)**

**Description:** The party who allocates/determines the Type of the creditor's reference.

If populated, the following should be used:

- National payment transactions in HRK: "HR ref" is used . If not , the order is still executed.
- National payment transactions in EUR: "HR ref" is used. If not , the order is still executed.
- Cross-border payment transactions in EUR: If "ISO" is used, ISO RF credit reference should be populated. If not , the order is still executed.

**XML tag:** <Issr>

**Occurrences:** [0..1]

**Data type:** Text/Text

**Data format:** maxLength: 35, minLength:1/min 1, max 35 characters

**Example:** : <Issr>HR ref</Issr>

## **2.144 Reference (Referentna oznaka)**

**Description:** A unique identifier specified by the creditor which unambiguously identifies the order (creditor's reference number).

If the Reference is known, the initiator of the payment must provide Remittance Information in a structured form (*Field 2.135 Remittance Information/Structured*), so that the creditor can identify the paid amount.

The Reference may be in accordance with ISO 11649 (RF ...) or the creditor's reference number.

- National payment transactions in HRK: It is mandatory to populate the model and creditor's reference number according to the Unique Overview of Basic "Reference Number" Models with Model Descriptions, Contents and Application Explanations as well as Applicable Control Number Calculation Modules, and Instructions on the Manner of Payment of Budget Revenues, Mandatory Contributions and Revenues for Financing Other Public Needs.

Model and Reference Number should be entered in a row, without spaces (eg HR002016-04-04).

If the model and creditor's reference number data is not populated, HR99 must be used. If the reference number is used without the model, the model HR00 must be populated.

If the model and creditor's reference number is not populated or HR99 and a payment description in the *Additional Remittance Information* field (2.147), the order is rejected.

- National payment transactions in EUR: It is mandatory to populate the model and the creditor's reference number according to the Unique Overview of Basic "Reference Number" Models with Model Descriptions, Contents and Application Explanations as well as Applicable Control Number Calculation Modules.

Model and Reference Number should be entered in a row, without spaces (eg HR002016-04-04).

If the model and creditor's reference number data is not populated, HR99 must be used. If the reference number is used without the model, the model HR00 must be populated.

If the model and creditor's reference number is not populated or HR99 and a payment description in the *Additional Remittance Information* field (2.147), the order is rejected.

- Cross-border payment transactions in EUR: If it is populated, the Reference may be in accordance with ISO 11649 (RF ...) or the Proprietary code.

## **8.1 Description of data population for the payment of salaries, other regular and occasional incomes and payment of regular suspensions**

The following section describes **the specifics** of creating XML messages or content of elements/fields for the purpose of issuing **instructions for payment of salaries, other regular and occasional suspensions**.

Payment orders for salaries and other regular and occasional benefits are populated according to the Contributions Act with amendments and other associated secondary sub acts.

When creating instructions for the payment of salaries, it is recommended to create a special group of orders (Payment Information) which will include only instructions for the payment of salaries.

For the purpose of issuing instructions for payment of salaries the following fields are populated in a specific way:

- 2.3 - Batch Booking (Način terećenja računa platitelja) - optional
- 2.14 – Category Purpose (Kategorija namjene)/Code (Kod)
- 2.17 – Debtor (Platitelj)/Identification (Identifikacija)
- 2.52 – Ultimate Debtor (Stvarni dužnik)/Identification (Identifikacija)
- 2.66 – End to End Identification (Jedinstveni identifikator – poziv na broj platitelja)
- 2.127 – Purpose (Šifra namjene)/Code (Kod)
- 2.144 – Structured (Strukturirana)/Creditor Reference Information (Referenca koju određuje primatelj plaćanja)/Reference (Referentna oznaka – poziv na broj primatelja).

All other fields are populated in accordance with the description referred to in Section 8. of the Guidelines.

### **2.3 Batch Booking (Način terećenja računa platitelja)**

**Description:** Indicates debiting of the Debtor's account in the total amount, and crediting of the "n" Creditor's accounts in individual amounts, or debiting of the Debtor's account for each individual amount credited to the Creditor's accounts.

If at the time of the payment of salaries the rule of debiting the Debtor's account in the total amount and crediting the "n" Creditor's accounts in individual amounts is applied, the indicator **TRUE** should be used. On the debtor's account statement, only one debit item is present .

In this case,:

- the debtor's account should have sufficient funds for the whole group of orders.
- the currency of the payment orders must be the same within the group
- the group of orders and all orders within the group must be correct

otherwise the group of orders is rejected.

**XML tag:** <BtchBookg>

**Example:** <BtchBookg>TRUE</BtchBookg>

### **2.6 Payment Type Information (Informacije o vrsti plaćanja)**

**Description:** Optional

If the Batch Booking contains "**TRUE**", then the Payment Type Information must be populated for the group of orders, or the group of orders is rejected.

**XML tag:** <PmtTpInf>

### **2.14 Category Purpose (Kategorija namjene)**

**Description:** Indicates the type of payment according to the defined categories.

If the Batch Booking contains "**TRUE**", then the Category Purpose is populated for the group of orders (field 2.14), and not at the level of the individual order (field 2.75), or the group of orders is rejected.

**XML tag:** <CtgyPurp>

**2.14 Code (Kod)**

**Description:** In the case of payment of salary this field is populated with the **SALA** code. The Creditor Bank can use the code **SALA** as an indication for calculating credit scoring of the Creditor.

**XML tag:** <Cd>

**Example:** <CtgyPurp>  
<Cd>SALA</Cd>  
</CtgyPurp>

**2.17 Debtor (Platitelj)**

**Description:** Mandatory

**XML tag:** <Dbtr>

**2.30 Identification (Identifikacija)**

**Description:** The code entered by the Debtor that should be forwarded, unchanged, to the Creditor.

**XML tag:** <Id>

**2.31 Organisation Identification (Oznaka organizacije)**

**Description:** In the case of payment of salary, it is mandatory to populate the field Other with the identification number (OIB) **of the personal income payer who owns the account**.

**XML tag:** <OrgId>

**2.52 Ultimate Debtor (Stvarni dužnik)**

**Description:** In the case of payment of salary and if the Batch Booking - field 2.3 contains "TRUE", it is mandatory to populate the Ultimate Debtor at the group of orders level (field 2.52), and not at the level of individual orders (field 2.82).

**XML tag:** <UltmtDbtr>

**2.55 Identification (Identifikacija)**

**2.56 Organisation Identification (Oznaka organizacije)**

**Description:** In the case of salaries, it is mandatory to use Other with the identification number (OIB) **of the employer. (personal income payer)**.

In the case of salary and, if the debtor - the account holder is at the same time the employer, then fields 2.30 and 2.56 are populated with the same identification number (OIB).

**XML tag:** <OrgId>

**2.57 Private Identification (Privatna identifikacija)**

In the case of regular suspensions, it is mandatory to use Other with the identification number (OIB) **of the ultimate debtor - a private individual**.

**XML tag:** <PrvtId>

**2.66 End to End Identification (Jedinstveni identifikator)**

**Description:** Mandatory

For the purpose of payment of salaries, or payment of regular commitments, the Reference Number of the Debtor is populated in accordance with the Contributions Act with amendments and other associated secondary sub acts.

**XML tag:** <EndToEndId>

**Example:** <EndToEndId>HR6712345678901-14033-0</EndToEndId>

**2.127 Purpose (Šifra namjene)**
