## 6. SPECIFICATION OF THE PAIN. 002.001.03 MESSAGE FORMAT

Index	Mult	Mandatory /Optional (M/O)	ISO element name	ISO XML tag (<XML Tag>)	Format	Element use and meaning
-------	------	---------------------------	------------------	-------------------------	--------	-------------------------

**Index** – element codes of the message are marked as in the ISO 20022 XML standard

**Multi rule** – the first data indicates the obligatoriness of occurrence of message elements, and the second data indicates the number of allowed repetitions

Example of the rule:

[0..1] – The element is optional and it can be specified once or never.

[0..n] – Indicates that the element is optional and can be specified once or *n* number of times.

[1..1] – The element is mandatory and can be specified only once.

[1..n] – The element is mandatory and can be specified once or *n* number of times.

Message elements are defined by their hierarchical structure. If data in a sub-element is entered, it is mandatory to specify the elements of a higher hierarchical level. If sub-elements are marked with {Or ... Or}, it is possible to use only one of them.

When an optional element is used, and it contains sub-elements (of a lower hierarchical level), the rule of populating that element (M/O) is mandatory and must be respected.

**Mandatory/Optional (M/O)** – the rule of use, mandatory or optional use

**ISO element name** – the name of the message element is given in English as defined in ISO 20022 XML standard, with a translation into Croatian. The element can contain sub-elements, which are shifted

to the right and marked with an additional »+« sign.

e.g.: ++ Debtor

+++ Name

**ISO XML tag (<XML Tag>)** – XML element tag e.g.: <Dbtr> Debtor/Payer.

Note: if using the tag, the corresponding element data may not be empty and at least one character must be entered.

**Format** – the element format is described, e.g.: Text, Code

**Element use and meaning** – describes the use and meaning of an individual field
